

What's in a square metre?

We understand that price is important when you're looking to build your new home. Often the first question homebuilders ask is "what is the cost per square metre", yet the true cost of a home depends on many factors. The more we know about your site and your new home requirements, the more accurately we are able to price your build. We explore what impacts the price per square metre in more detail below.

Shape of the home

These homes have the same floor area of 100 square meters yet the perimeter walls length is different on each. Generally speaking, the exterior wall is the most expensive wall due to insulation and cladding requirements. A home with more perimeter wall will likely require more joinery and a complex design will require more labour to build, all impacting the cost per square metre.

Size of the home

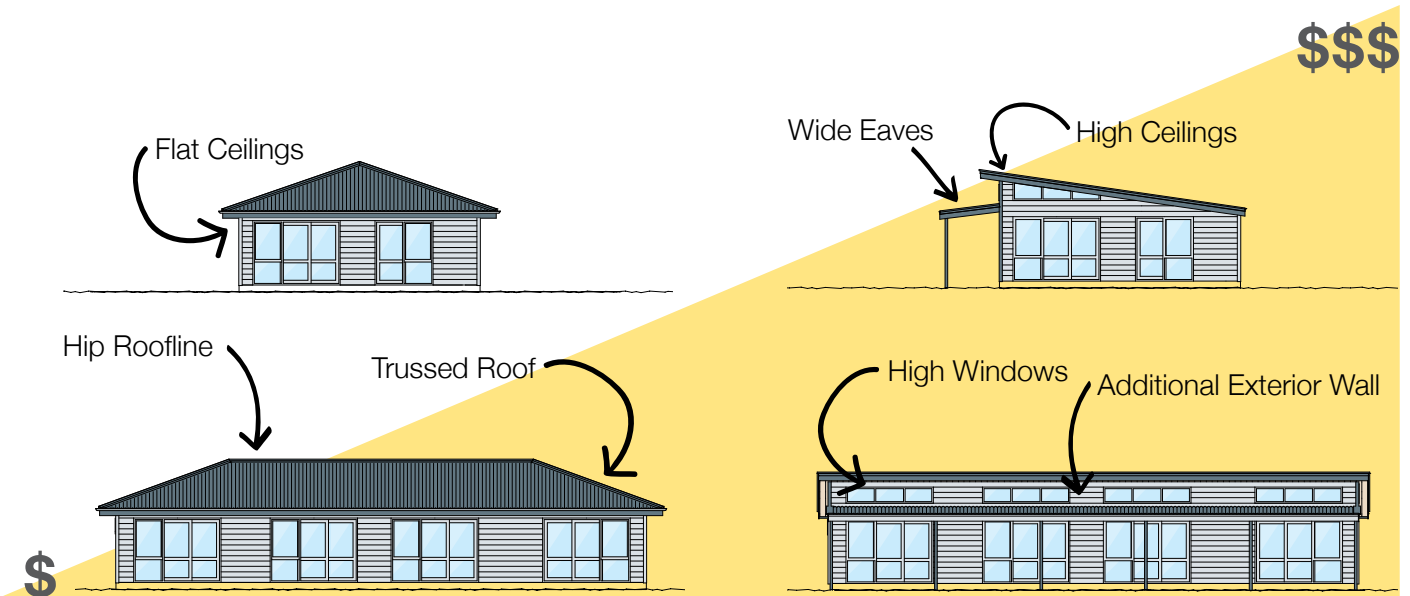

Generally speaking, larger homes are often have a lower cost per square metre simply due to there being more space to divide the costs into. With a smaller home you have less square meterage to divide the costs of expensive rooms such as kitchens and bathrooms into. Comparatively, a large garage, which doesn't require an expensive interior fit out, will bring down the cost per square metre.

Complexity of design

A more complex home design will have a higher cost per square metre. Split level, double storey, or homes that need specific structural engineering will also be more expensive.

The examples below both share the same floor area yet the home on the right will be more expensive to build. The higher roofline, additional wall area and joinery as well as the high sarked, timber ceilings will all contribute to a higher cost per square metre.

Complexity of site

Sites that are sloping are more expensive because they require extra earthworks. So too are sites that are not on 'good ground', such as peat, organic soil or soft clay which are more expensive due to piling and extra foundation requirements. Distance to services, removal of greenery and access to the site will also impact on overall costs.

Planning to maximise your budget

The level of finish in your new home, room sizes, quality of fixtures and fittings and cladding options will also have an impact on your cost per square metre. It's important to consider all factors and ensure you get an accurate quote for your build, rather than an estimate based solely on the square meterage. We know that price is important to you and offer our experience and expertise, working with you to plan your build to best fit your style, site and budget.
